The Sewers Remastered

Script

2023 Paper Computer Game

By: Epic Underworlds

Background: This is a remaster of Chris's classic PCG, "The Sewers", I was inspired to make this after hearing that the game was lost to time. I scrapped together my best representation of what the game may have been about.

You play as a kid named Xaq, along with his friends Laura and Collette. They realize that their friend Ari has been captured and they must rescue her!

Screen #1

The trio enters a strange sewer system that smells of pollution.

The boat in which Collette, Xaq, and Laura are inside. It is made of metal. They also start with two paddles in their inventory.

A ladder that the crew must jump onto. (Using the paddle)

An evil laser robot. To defeat it, the crew must deflect the laser beam by tilting their boat up.

Screen #2

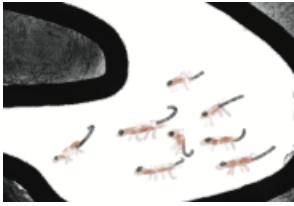

The ladder leads to a big maze screen, the players must navigate it and save Ari. The passage that took the trio to this new room is now flooded so the players can not go back, unless they say, “save game”

Xaq, Collette, and Laura

Sewer Sludge: The player can pick this up. It is extremely toxic so they must use the paddle.

Rats: A massive swarm of rats, the player must take the barrel of Gron Oil and shoot it to blow up all the rats. If you just try shooting them, they deflect the bullets, if you try using the sewer sludge, it only makes

them bigger.

A guy: An evil guy that you can attempt to talk to. His name is Jimmy, he works for The Company. Otherwise, you can easily knock his gun out of his hands with the paddle. Or use the boat as a shield.

Evil Robot: Use the boat or a paddle to block the hits until you can deflect the laser with the boat, barrel or paddle.

Sewer Grate: Collette is stuck in here, the player must use the sewer sludge to melt the grate.

A poster: A simple poster the player can pick up.

Gron Oil: The player can shoot the oil can and make it explode.

The Fat Guy: A giant man who wants to block your path, You can either scare him away with rats, blow him away with Gron oil, or somehow convince him to move.

Concrete Walls: Must be melted away with lava or sewer sludge.

Door: You must get the key from the “lava pit” to open this door. It leads to screen #3.

Lava Pit: The player can use the paddle to push the Guys in the lava, or use the super sludge to turn the lava into obsidian. The key is also at the top right. The player can also throw the boat in the lava which would splash the Guys.

Item Box: This is an item box, the player can put in any item they wish, and it will appear in their inventory in the next game. If they had previously used one, their items will appear once opened.

Spikes: The player must use the boat or paddle to create a bridge over the deadly spikes.

Evil Robots: Can easily be defeated by using the boat as a shield.
OR: the player can try rolling the fat guy down the hallway to squish these robots.

Bombs: these can be used later...

Screen #3

The players enter the final room! After this, their journey is over and they can return home.

Dinomantis: A giant dinosaur. The players must throw their bombs in his mouth in order to defeat him.

Ari: He must be saved!!

Ending: A figure known as Zoovac comes and picks up the players in a private jet, taking them to their next adventure...
