2022 Paper Computer Game Add On

By:Epic Worlds PCG

This is a PCG-add-on for mercado. You can use this add on with any game you wish. You can use this trading post any time you find a shop or market in a paper computer game and want to enter it, then you can use this add-on to see what you find in the shop. On the first page you just see the shopkeeper Godon, and some basic starting items to trade for. Once these items are used, then you can cross them out on the page. When your player trades, they may say what item they wish to have, and you as the PCG master must decide if it is a fair trade or not. You may trade items you find in the PCGs you play, or items you buy from mercado. What's fun is after your player, and others trade in the shop, then the inventory will build up with a bunch of items your players traded for. If your player wants an item that they might have traded for previously, they just simply trade for it again.

- The player can trade as many items as they want
- Once the player has traded an item, then write it down on the shop inventory page, and keep it updated once items go in and out.

Enjoy :)
