

INTERESTING INVENTORY

This PCG Add-On is all about inventory screens. What's in them, what you can do with them, and the fun you can have with them. Feel free to choose any or none of these to use in your games. 😊

Max Inventory: Max inventory only allows your player a max of 3 items. 	Mercado Inventory Screen: If players find Mercado Coins in your PCG, you can allow them to access this Add-On at any point in the game. This allows them to purchase Inventory Screen upgrades along the way. (2 Coins): Inventory Screen Protection Plan: All of your items are protected and can not be destroyed. If you use an item and let's say you drop it in lava, you can simply use this and return it to your inventory. (5 Coins): Melt two of your items together to create a new item. (10 Coins): Have all of your items carry on to the next PCG you play. (20 Coins): Double all items in your inventory screen once.
Unlimited Inventory: This is an exaggerated form of an Inventory Screen. This Add-On allows your players to shove whole trees, boulders, characters, and anything that you allow them to in their inventory!	Team Inventory: This Add-On is for those who play multiplayer PCGs. All players share one inventory screen.
Inventory Pest: Xaq has used this in the past, so now let's make him an official Add-On. The inventory pest can crawl into the player's inventory screen and eat their items. In order to stop it, the player must feed it junk so it does not eat their main items. Players can also not use "save game" to get rid of him.	Elemental Inventory: This Add-On allows your players to add strange things into their inventory such as Lava, Air, Water, Stone, and other elements.
